Mreža mladih Muftijstva tuzlanskog
Medžlis Islamske zajednice Gornja Tuzla
Škola programiranja "Java Academy" Gornja Tuzla

HOMEWORK after 17th lecture

1. Create new Java project.
2. Declare int array of ten elements, ask user to fill array. Use for each to sum each odd number. Print out sum.
3. Declare string, ask user to enter string. Use method toLowerCase, check how many letters "a" is in the string.
4. Ask user to enter two integers, one will represent a year and the other will represent a month. Print out how many days have a month. Don't forget to check if year is leap year. A year is a leap year if it is divisible by 400 or if its divisible by 4 but not by 100. (Use switch)
5. Push homework to Git.
